Aldelo Lite This is a scaled-down version of Aldelo Pro for take-out and delivery style establishments. Aldelo Lite does not include the inventory and employee management functionality found in the Pro version, but offers superior functionality for counter service and delivery, especially where multiple POS stations are deployed. Aldelo Lite also exhibits identical multi-lingual capabilities as Aldelo Pro.

Aldelo Pro A full featured restaurant POS software offering dine-in , delivery, and take out functionality with extensive inventory, recipe, and menu control, employee scheduling, and financial reporting. Aldelo Pro is suitable for multiple POS stations, multiple locations, and a multi-lingual staff, with built-in support for English, Spanish, Traditional Chinese, and Simplified Chinese. It is also fully programmable (outside of the application) to support any language of your choice.

Aldelo Wireless This wireless software includes all the features listed above of the popular Aldelo Pro with the advantage of using handheld PDA's on a network. With Aldelo Wireless, servers no longer need to write down customer orders at the table and re-enter the order at the computer station, instead orders are entered wirelessly on a Pocket PC device running Aldelo For Restaurants® Wireless Edition, and then automatically submit the order to the kitchen / bar for fastest turnaround time and accurate orders every time. Orders can be recalled and edited on any table side order that is not yet closed on the PDA device, improving wait staff efficiency and customer service. Aldelo Wireless also exhibits multilingual capabilities.
