ICVERIFY® for Windows® offers the features and functionality you need in one easy-to-use, yet powerful software package

Whether you are a day care center, health club, mail order or telephone order fulfillment house, professional office, small or mid-size retail business, the IC*VERIFY* software has the right solution for your business needs – in one easy-to-use program.

The IC*VERIFY* software can be certified with most processor's front-ends and integrated with most retail and MO/TO systems. It can also be interfaced to a POS or order entry system sharing a PC platform, and provide communications with the outside world for authorizations and batch settlement.

The IC*VERIFY* software offers an entire suite of solutions for most retail and MO/TO businesses:

- Single-user license to a multi-user license
- Stand-alone to networkable configurations
- Single merchant to multiple merchant number (MID) support

The IC*VERIFY* software is easier to use than a cash register:

- Performs all functions of a bank terminal with the flexibility and power of a PC
- Inexpensive to install and easy to maintain
- Upgrades are easy – On-screen help
- Single settlement for all card types and complete transaction reporting allows for fast and accurate end-of-day closing.
- Easy to use Graphical User Interface (GUI) and training mode can enhance ease of use and simplify training.
- Fraud Features such as Address Verification Service (AVS), CVV2/CVC2, and account number truncation/expiration date suppression on customer receipt help keep you in compliance with Association regulations and state laws.
- Password protection allows Managers to protect sensitive functions.
- Store's transaction data for up to nine years, (depending on available hard drive space) giving you an alternative to traditional paper receipt storage and helps you to efficiently retrieve and analyze information in a few keystrokes, respond quickly to customer information requests and easily reconcile your bank statement.
- Full reporting capability and 8-1/2 x 11 inch printouts make statement reconciliation a snap compared to 3 inch tapes.
- Provides reporting to match the exact dates of your merchant statement - greatly reducing reconciliation time.
- Mail/Telephone Order merchants will enjoy the Book/Ship feature. Booking a transaction authorizes and places a hold on the transaction amount (similar to an auth-only transaction). The Ship transaction is used to complete a book transaction. Once a book has been shipped, it is eligible for settlement. Smart, yet simple.
- Electronic Commerce Indicator (ECI) flag helps keep you in compliance for the occasional Internet transaction.
- Merchants who bill the same amount on a recurring basis will appreciate automating the process of managing and charging payments on a monthly or quarterly basis with the installment (fixed number of payments - payments cease without intervention) and recurring (continuous payment - require clerk intervention to stop billing) billing feature.
- Service-based merchants such as beauty salons will be grateful for the MasterCard® tip support function that allows consumers to add gratuities in a single transaction.
