- Available in dark gray or beige

Reliable, Heavy-duty Cash Drawers

The CR1600 was built to meet the toughest requirements of retail customers. The unit uses industrial-grade ball bearing slides for smooth and long-lasting operation. The CR1600 is made with heavy-gauge sheet metal and a reinforcement beam for supporting heavy top loads. The unit incorporates a high security design with all metal construction and no external screws.

Flexible Features to Meet Customers' Needs

Logic Controls designed the CR1600 with flexible features focused on the requirements of our customers. The CR1600 includes an easily accessible cable management compartment to remove the clutter and risk of pulled plugs that loose cables represent. In addition, 3 holes are provided for securing customer pole displays and peripheral cables, and these holes can be covered if not needed. The CR1600 also includes media slots and a till with adjustable bill and coin compartments that can be configured to your needs.

Supports Wide Range of Interfaces

The CR1600 cash drawer supports a wide range of interfaces: printer-driven, standard or programmable serial or USB with a virtual serial port driver. Through the use of a Logic Controls EasyConnectCable, all major brands of printers including Epson, Star, Ithaca and Citizen are supported. In addition, the CR1600 is available in port-powered models that have either a serial or USB interface and do not require power adapters or a connection to a receipt printer.
