

Desktop Business Modems

Benefits

- Dial-up and 2-wire leased line support
- Class 1 and Class 2 fax support
- Remote Configuration
- Callback Security
- Global Approvals

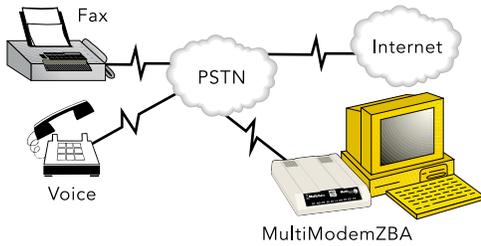

The MultiModemZBA corporate user modems provide high-speed data transfer and fax capabilities for small businesses, telecommuters and SOHO users. Features like remote configuration, callback security and 2-wire leased line support set the MultiModemZBA apart from other basic desktop modems. In addition, it is approved for use in many countries around the world. This means one model can ship virtually anywhere.

Features

- V.90/56K downloads (from V.90 servers) and 33.6K data rates for uploads or peer-to-peer transfers
- Class 1 and Class 2 faxing at 14.4K
- Windows Plug-and-Play operation
- U.S. Caller ID reporting
- Remote configuration for centralized setup and management
- Phone number storage for automatic or DTR dialing
- Pass-through, fixed, and variable callback security
- Voice mail support and full-duplex speaker phone operation on voice models
- Global model with approvals in many countries for use worldwide
- Multi-language data/fax software for Windows
- Self-resetting lightning protection
- Small footprint and stackable design
- Flash memory for easy updates
- Ten-year warranty

*High-Speed Modems
for Small Businesses,
Telecommuters and
SOHOs*

Highlights

Advanced Features. The MultiModemZBA family provides powerful features that make it perfect for business use. All models support US Caller ID, DTR dialing and 11-bit operation. The voice model supports full-duplex speakerphone operation so you and a caller can talk and listen at the same time.

Remote Configuration. Whether you provide connectivity for a sales office just miles away or for multiple office across the world, the MultiModemZBA lets you take care of the configuration from a central site.

Callback Security. The MultiModemZBA provides password protection and helps reduce long distance charges for remote offices and users requiring access to the central site LAN. This modem supports 30 passwords and three configuration options. With the "fixed" callback option, the central site modem stores a password and the remote user's phone number. Once the remote site enters their password, the central site's modem calls back using the number stored in its database. The "variable" option lets users, such as road warriors, enter their fixed password and a call back number each time they call. The "pass through" option is used to provide the security of password protection, while bypassing the call back process.

Integrated Voice, Data Communications and Fax Software. The bundled software for these modems has an easy to use graphical interface for use under Windows 95/98/Me/XP and Windows NT®/2000.

Global Model. With the MT5634ZBA-Global, you need just one modem for worldwide use. This model has approvals in many countries so you can ship one SKU (stock unit) virtually anywhere in the world. The global modem is ideally suited for OEM customers, multinational corporations and systems integrators. Go to www.multitech.com/globalmodem for more details.
