## Complex Applications

PrehKeyTec's programmability makes even the most complex software simple! Our unique design allows users to program more than 100 key strokes behind each key providing the operator the ability to drill down into an application with a single key stroke. This advanced programmability helps simplify operator training and enhances data input.

## Aggressive Environment

Our robust keyboards are designed to withstand "Heavy Fingers" and 30 Million key strokes, a metal base plate allows our keyboards to remain rigid in the most demanding environments.

Spills? Our keyboards are protected against spills and dust!

Designed specifically for heavy use applications, PrehKeyTec keyboards continue to perform long after others have failed. PrehKeyTec is so confident of our German engineering, that a three-year warranty is standard on every unit.

Available in both Row & Column and an Alpha layout, the PrehKeyTec MCI 96 optimizes a small footprint by only including the integrated options needed. This efficient design, and the completely programmable layout give you everything you need and nothing you don't.

Can your keyboard be easily reconfigured on site to match ongoing changes in your software and operations? The WinProgrammer software helps you program each key position and make layout changes whenever needed.

Stuck keys - impossible  
Ugly equipment - gone  
Learning curves - shorter  
Counter space - increased  
Down lanes - rarely  
Store image - reinforced
